

Remanufactured Forklift Parts

Remanufactured Forklift Parts - Lift trucks are very costly pieces of machines. A five thousand pound new electric unit could cost between \$18,000 to \$25,000 and several thousands of dollars more will be needed for a battery and a battery charger. A similar internal combustion lift truck of the same lift capacity would cost slightly less and the diesel models which are capable of heavier lifting capacities can cost upwards of one hundred thousand dollars. Reconditioned lift trucks are an alternative in order to save much cash since they cost less than half the price of brand new models.

A few buyers may be leery about buying a used or reconditioned forklift for the reason that they feel they would have to spend more on upkeep. However, a correctly reconditioned forklift will be able to work just as well as a new one. Even though your lift will get heavy use, so long as you take good care of the equipment, it would serve your requirements and possibly save you lots of money.

When thinking about acquiring a used lift truck, it is important to determine what the seller means by the term reconditioned or refurbished. Many companies do an excellent job of entirely making over the model prior to reselling it. This consists of disassembling the forklift, rebuilding the engine, sandblasting the lift and then reassembling the whole thing and finishing with a fresh coat of paint.

To correctly and meticulously reconstruct a forklift engine, a good business would totally disassemble it. A heat cleaning system can then be utilized to clean all the parts. As soon as this step has been done, all of the parts are checked to see if they have any extensive wear, any defects or breakage. Some components such as crankshafts, cylinder blocks, connecting rods and cylinder heads are resurfaced, resized and reground if necessary. Various components like for example nuts, bolts, gears and so on. are repaired or replaced as considered necessary.

As soon as the overhaul has been completed, the engine is rebuilt by hand. After being put back together, a series of tests are applied to the running equipment to be able to check all of the components and be certain there are no leaks or issues. If any problems occur, the needed modifications are made.

There should be no reason to be apprehensive about obtaining a reconditioned or refurbished lift truck from quality sellers. The process of rebuilding the machinery ensures the utmost in dependability. Maintenance costs may really work out to be less as you would avoid the initial phase of higher upkeep projections which a brand new lift truck has as it is broken in. By following routine maintenance schedules and taking care of the equipment properly, a reconditioned lift truck will serve you well.
