

Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is a hydraulic apparatus that can allow the driver to be able to control the forklift without leaving the seat. They are constructed out of top quality materials and are meant to endure the most difficult operations and work environments. Side shifting models have the added ability to laterally position the arms or the entire load in order to facilitate more accurate lifting and position in a quicker and more efficient method.

The only one of its kind blade pocket design can enable the individual operating it to securely sway the unit's forks without any fear of damaging the positioning cylinders. This can allow the worker the choice to either perform independent or simultaneous blade movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into fork positioners on existing units.
