

Doosan Forklift Parts

Doosan Forklift Parts - Doosan Infracore Company Ltd. is a transnational organization consisting of Diesel Engines, Defense Industry products, Industrial Vehicles, Construction Technologies and Machine Instruments and Mechanization Systems.

Their United States partner, Doosan Infracore America Corporation, located in Suwanee, Georgia houses a 170,000 square foot production facility, home to a Compact Equipment and Construction division. Cleveland, Ohio houses the Lift Truck division, and West Caldwell, New Jersey has a Machine Tool department. The U.S. headquarters in Georgia facilitates a first rate parts operation capable of supplying an excess of 25,000 line items to support Lift Truck, Compact Equipment, Machine Tool and Construction consumer needs.

There are well over 220 Doosan service and sales locations operating in Canada and the United States. In addition, there are more than 90 independent dealers moving forklift supplies and materials handling equipment. This network permits Doosan Infracore America to aggressively compete in this competitive marketplace. The lift truck product line impressively includes 63 distinctive products consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion vehicles. Capacities of these numerous vehicle designs vary from 3,000 to 33,000 lbs. All vehicles are built in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest rising forklift and lift truck corporation in the North American market, due to its outstanding level of product performance and their consistently high level of customer support and service given to all Doosan Infracore Forklift users. The U.S. forklift division situated in Cleveland has a expert team experienced in Product Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's original home-based forklift market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled lift trucks as part of a nationwide equipment expansion venture. Initial sales of this industrialized equipment focused on large business groups, the armed services and on state-run firms. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical training grew to become the new focus for improving quality and product development.

Daewoo started the first home-based lift truck business in 1967, and quickly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's progressive technological improvements combined with sales success placed them in a position of considerable expansion of their forklift operations.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to assist them in the very competitive North American materials handling market. This project proved highly lucrative for Daewoo and their lift truck product sales expanded greatly. In 1984, the company finished construction of a new facility to help in producing high end value-added products for export. In 1993, the corporation had a global sales network and started exporting designs they had developed through in-house expertise, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into international marketplaces.
